

# Cushion Options:

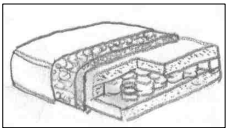

## **POLY FIBER Standard**

Our Standard cushion is made with a 1.8 dense, 24 lb. compression polyurethane foam, which is then surrounded by polyester fiber for softness. The foam is encased in a polyester fiber sewn ticking. This

fabric is UFAC approved and allows for the cushion to breathe. The foam seat offers a soft surface feel that conforms to the body. As needed, the construction of this cushion is modified to achieve the degree of softness desired.

### **Extra Firm (\$60 per cushion upcharge)**

Same cushion core as above, but modified by increasing the compression for the extra firmness.

## **SPRING FIBER Add: \$75 per cushion**

Within the center of the cushion, there is an encased spring coil unit that offers support. The spring coil unit is layered on all four sides with a 1"

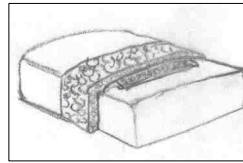

cap of 1.8 dense, 24 lb. compression, wrapped with polyester fibers and finally encased with the polyester fiber sewn ticking. The Spring Fiber cushion provides deep firm support. This cushion construction works for a minimum of 3.5" or greater cushion border.

## **MAJESTIC SPRING FIBER Add: \$75 per cushion**

A unique combination of comfort & support, this cushion starts with a high quality 3-inch spring coil unit in the center. This spring unit is capped on all sides with

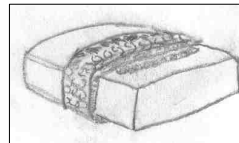

a 1" layer of 1.8 density high-resiliency foam for support, then surrounded with a layer of polyester fiber. A sewn non-woven ticking encases the core, finished off with sewn channels to hold fiber that is blown into the top for a final layer of comfort. This cushion construction requires a minimum of 4.5" cushion border to execute.

## **CROWN ROYAL Add: \$75 per cushion**

The central core is a 2.3 density high-resiliency Qualux foam with a 16 lb. compression. Then a 2 oz. plush fiber crown patch is inserted on the top and bottom, followed with a 2 oz. plush fiber wrap before

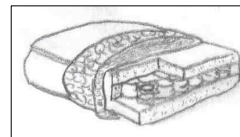

being inserted into a non-woven polyester sewn ticking. Our Crown Royal cushion provides the highest crown and softest seat, yet will hold its shape better with use since the softness is achieved within the core itself as well as the fiber wrap. This cushion construction works for cushions with borders that are 3.5" or greater.

## **ROYAL DOWN Add: \$105 per cushion**

The central core is the 2.3 density high-resiliency Qualux foam with a lower compression. Then a 2 oz. plush fiber crown patch is inserted on the top, followed by a layer of 2 oz. plush fiber

and finished off with a Down-proof fiber ticking, filled with 50/50 down and feather blend. This cushion construction works for cushions with borders that are 3.5" or greater.

## **ULTRA SPRING DOWN CUSHION/ MICROFIBER DOWN BACK Add: \$180 per cushion & back/\$120 cushion only**

Starting with a high quality Marshall spring unit featuring 2 inch coils, completely wrapped in 2 inch high resiliency

foam, the cushion is topped with an all-feather/down bag with down-proof inner liner and ticking. We always recommend pairing this cushion with a MicroDown back pillow, a super comfortable microfiber and feather/down combination. The overall feel of this cushion/back pairing is dense and "meaty" but also soft with a superb memory-return. This cushion construction requires a minimum of 4.5" front cushion border to execute.
