## SELECT HARDWOODS

Copeland selects hardwoods with a long history of sales performance in the North American marketplace. These well established species remain prized and continue to attract top dollar with consumers.

CHERRY

OAK

**CHERRY** offers superior woodworking characteristics. A strong hardwood with a subtle grain pattern add a uniform texture, its color darkens with exposure to sunlight. It is important to understand that exposure to light accelerates the natural oxidization process. An objects left on a cherry wood surface for an extended period of time may retard the aging process in a limited area. Simply remove the object and, over time, the surface will attain a uniform reddish brown color.

**MAPLE** is a heavy wood characterized by straight grain or clusters of curls (burls). It is highly resistant to abrasion and indentation and the natural color ranges from cream to light brown.

**AMERICAN BLACK WALNUT** is a dense wood with a uniform to highly figured grain. The color ranges from light gray-brown to dark purplish-brown. Its rich patina deepens with age.

**OAK** is a dense wood known for its great strength and hardness. The wood is very resistant to insect and fungal attack because of its high tannin content.
